

## Ryco Filters Benchmark Communications

Technical Bulletin:

Product: Z23

Date: 17/12/13

Topic: Discontinued Z23

No. of Pages: 1

## Discontinued Part: Z23

We get a number of enquiries about the discontinued part number Z23. Originally designed to suit popular British Austin's and Morris cars this spin on oil filter is now no longer in production after being discontinued in 2010. However we can recommend an alternative.

Z23 Description: Spin On Oil Filter

Thread: 1/2-14 BSP-2B

Suited: Austin, Leyland and Morris Cars

Contains: Stack tube, Pressure Relief Valve and Anti-Drain Back Valve

Interchange able with: **Z38**

Description: Spin On Oil Filter

Thread: 3/4-16-UNF-2B

Contains: Stack tube, Pressure Relief Valve and Anti-Drain Back Valve

Due to the unique thread of the Z23 an adaptor from the 1/2-14 thread (Z23) to the 3/4-16-UNF-2B thread (Z38) is required for fitment. This adaptor is not available from Ryco, we recommend you try a local car club or specialist spare parts supplier.

The Z23 is not interchangeable with any other part in our range other than the **Z38** and is available from your local Ryco distributor.

**CAUTION:** Do not rely on exterior dimensions when comparing spin on oil filters. Spin on oil filters may have internal components and/or construction not visible to the eye.
